Diathermy Electrodes

The diathermy electrode range from Elite Medical consists of high quality single-use devices for a variety of surgical procedures.

They are designed and manufactured as a result of the demands of leading surgeons and specialists, ensuring clinical performance.

Non-stick PTFE coating (where supplied), reduces the build-up of carbonised material (eschar) on the electro-surgical tips during surgery. This reduces the need for higher output settings which can cause damage to the peripheral tissue.
